

SCOTT SCHOBER

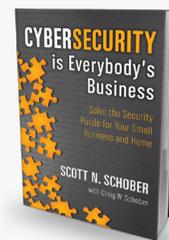

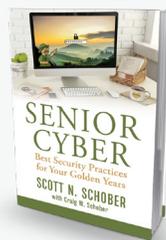

BIO

Scott Schober is the author of three best-selling security books: **Senior Cyber**, **Hacked Again**, and **Cybersecurity is Everybody's Business**. He has dedicated himself to educating as many people as possible by telling his own stories of being hacked with the hope that others can learn from his mistakes.

As a lifelong technology innovator and inventor, Scott began seeking ways to help seniors seamlessly adapt to our ever-technological world, based on his and his brother Craig's experiences with their elderly parents and the myriad of questions from a growing elderly population. In *Senior Cyber*, Scott and Craig pick apart a multitude of cybersecurity scams that relate directly to the financial, socioeconomic, and health & well-being of all seniors by offering simple advice for all levels of cybersecurity experience for grandparents, grandchildren, and everyone in between.

"As computer users grow older, so does their median income. Unfortunately, their ability to discern and report scams while staying up-to-date on the latest cyber threats seems to decrease with age," Scott says. "Criminals know this about baby boomers, so I wrote this book [with the aim of] helping empower seniors without overwhelming them."

In addition to his writing prowess, Scott is a highly sought-after author and expert for live security events, media appearances, and commentary on the topics of ransomware, wireless threats, drone surveillance and hacking, cybersecurity for consumers, and small business. He is often seen on ABC News, Bloomberg TV, Al Jazeera America, CBS This Morning News, CNN, Fox Business, and many more networks.
